

# SOLREVIEW

Agency reporting to MTC, CEC, CCEF, NJCEP and many others:

## Product Details

### Inverter Direct Monitoring Package

Inverter direct monitoring allows you to see detailed inverter data (AC and DC) using your web-browser. Go back in time and flip through the daily, weekly, and monthly graphs up to 5 years in the past to view single events or long-term trends. The package includes email alarms with detailed descriptions of sudden system problems and a recommended course of action. This service is only available for the industry-leading Solectria PVI series inverters.

### Revenue Grade Energy Production Monitoring Package

The revenue grade energy production monitoring package keeps an accurate count of every kWh produced by your PV system. We automatically report this number to your solar program agency for your convenience. This package includes email alarms with detailed descriptions of sudden system problems and a recommended course of action. This service is available in 1kW – 1MW using any inverter make and model.

### Sub-array Monitoring Option

Sub-array monitoring enables you to detect underperformance of your commercial PV array down to a single non-contributing string that might otherwise have gone undetected for years. A must have tool to back up your PPA deliverables. This option is only available for Solectria PVI 60kW/82kW/95kW series inverters.

### Building Energy Demand Option

The building energy demand option encompasses a second Revenue Grade Energy production meter, which is overlaid with the PV production graph to visualize net energy flow at your site. This option may also be used for billing a tenant on a monthly basis by metering the electricity that is flowing into an electrical sub panel (if allowed). This option is only available as an add-on to the revenue grade package.
